IN THE CLAIMS

Please amend the claims as follows:

- 1. (original) A portable stylus information input processing apparatus (1) with a removable stylus (2) and a stylus housing (9), a user interface (UI) (3), said apparatus comprising a computer program for running a user-interactive application on or via the apparatus, or a means for inputting such a computer program, interaction taking place by contact between the stylus and the user interface (UI), characterized in that the apparatus comprises means for generating a release signal (6) generated by a program run on or via the apparatus to release the stylus, the stylus housing comprising a receiver for receiving said release signal and a release mechanism (7) for releasing the stylus in response to the release signal (6).
- (original) An apparatus as claimed in claim 1, characterized 2. in that the apparatus comprises a program for running an application on or via the apparatus, wherein in operation occurrence of an event triggers the release of the stylus.
- (original) An apparatus as claimed in claim 1, characterized in that the event triggering release of the stylus is formed by a

transition between a first level and a second level of an application.

- 4. (currently amended) An apparatus as claimed in claim 1—or 2, characterized in that the apparatus comprises a program comprising a program code for displaying a soft button (11) on the User Interface, while touching said button generates a release signal.
- 5. (currently amended) A computer program comprising program code means for use in a device as claimed in any one of claims 1 to 4claim 1.
- 6. (currently amended) A computer program product comprising program code means stored on a computer readable medium for use in a device as claimed in any one of claims 1 to 5 claim 1.
